

YSoft and Media company

We provided central reporting and accounting, together with printing and copying cost reduction and increase of security of scanned documents.

Introductory Information:

- Increase the overall efficiency of the entire print environment.
- Increase convenience of use for staff.
- Centralize operations under one administrative base.
- Increase security of sensitive documents.
- Enable closer monitoring of costs.
- Set rules that enable staff to increase efficiency and reduce costs.
- Integrate any solution into the existing Novell environment.
- Simplify faxing.
- Integrate any solution with the existing OneFax server application.

The solution:

- Centralized administration.
- Tailored reports for automated internal cost accounting and importing into company's client information system.
- Integration to Novell server network and LDAP.
- Integration of YSoft SafeQ Scan module with OneFax system.

The results:

- All print, copy and scan jobs are now centrally monitored and accounted through a single web-based interface.
- Automated, enforceable rules for employees.
- Security of scanned documents.
- Full DB cluster solution.

Customer profile

The customer is large and renowned media company. The customer successfully operates in daily newspapers and magazines segment, cinema segment, outdoor advertising, radio broadcasting and the Internet segment.

The challenge

Because of the company's growth last 20 years, the customer conducted a review of their entire printing, copying, and scanning environment. As a result of the study, they outlined a number of current needs, requests and specific requirements to be met:

- Increase the overall efficiency of the entire print environment
- Increase convenience of use for staff
- Centralize operations under one administrative base
- Increase security of sensitive documents
- Set rules that enable staff to increase efficiency and reduce costs
- Integrate any solution into the existing Novell environment
- Integrate any solution with the existing OneFax server application

The solution

- YSoft SafeQ Enterprise Edition with YSoft SafeQ Terminal Professional terminals provides the foundation of the entire proposed solution. Together, these enable centralized administration of the entire print environment from one place and ensures accurate accounting of all prints, copies, and scans—by departments or by individuals.
- Reports were tailored to customer specific needs and are used for automated internal cost accounting and for importing into the company's client information system.
- The entire solution was integrated with the customer existing Novell server network and their e-Directory services (LDAP).
- The YSoft SafeQ Scan module was successfully integrated with Agora's existing OneFax system. All scanning operations are now secure and larger documents are sent to users as encrypted links.

The results

- All print, copy and scan jobs are now centrally monitored and accounted through a single web-based interface, enabling the customer to increase efficiency and cut overall costs.
- YSoft SafeQ enables the customer to monitor and analyze usage across the entire print environment, providing vital information to further optimize print operations.
- Automated, enforceable rules guide employees to use the most cost-effective MFP for every job.
- YSoft SafeQ assures security of scanned documents by incorporating user identities into the document, ensuring that no document appears with an unknown user.
- The YSoft SafeQ full DB cluster solution and the SafeQ follow-me feature enables efficient distribution of load across all the company's MFPs and increases convenience for the staff. Users send their print jobs from their PCs and collect them from any convenient MFP after using their company ID card to identify themselves.

Benefits at a glance

- Central monitoring and accounting of all print, copy and scan jobs
- Increase of efficiency and cut of overall print and copy costs
- Increasing security of scanned documents

Solution specifications

Xerox products supported:

Xerox installed a YSoft SafeQ full DB cluster (2 nodes) with 35 YSoft Safe Terminal Professional terminals connected to Xerox WCP7345 MFPs, and 47 direct queues to monitor usage of Xerox Phaser network printers.

Software:

- YSoft SafeQ Enterprise Edition

Applications supported:

- Novell Server, LDAP
