YSoft SafeQ helps to reduce the waste of paper used in

the copy and print operations

YSOFT
SAFEQ®

Introduction:

- Absence of central printing and copying costs monitoring.

- No possiblility to alocate the cost to certain departments.

- Absence of security of access to MFDs.

- Lack in the MFD availibility.

- No central management of the printing enviroment.

The solution:

- YSoft SafeQ Enterprise edition

- YSoft SafeQ Terminal Professional or YSoft SafeQ Terminal Embedded

- Customer Active Directory integration with ID card management

- Integration with existing ID card management systems

- YSoft SafeQ Scan Management

- Customised reports according to the customer´s needs

The results:

- Consolidates user authentication, leveraging existing employee ID cards.

- Integrates the printing solution, enabling seamless printing from any existing legacy or third-party system.

- Provides a central overview of all printing and copying operations.

" Before SafeQ implementation, tons of wasted printed paper were left at printers and MFDs. Thanks to Secured Print and Follow-Me, our printing operations have been opti-mized and the number of wasted pages has been reduced by 30 percent."

Customer profile

The customer is a large bank or financial institution with offices in multiple locations, or a centralised bank with as many as 50 branches interconnected with fast network lines. User authentication and IT infrastructure are based on Microsoft Active Directory. Policies are in place for processes and for IT solution adoption. The customer has 1,500 to 12,000 employees. The monthly volume of printing is from 3 to 7 million pages.

The challenge

The customer is using mostly local printers directly connected to user workstations. High operating costs of the local printers is a major problem for the customer. Also, no detailed reporting and departmental chargeback is possible; all costs associated with printing and copying are allocated to the IT department. In addition, securing access to MFDs located in public places (corridors, meeting rooms, etc.) is impossible, creating a potential security risk for sensitive and confidential information.

The solution

YSoft SafeQ Enterprise edition

YSoft SafeQ Terminal Professional or YSoft SafeQ Terminal Embedded

Customer Active Directory integration with ID card management

Integration with existing ID card management systems

YSoft SafeQ Scan Management

Customised reports according t the customer´s needs

The results

- Provides specialized reports for analysing the printing environment and suggesting ways to optimize processes and devices.

- Integrates printing operations with Active Directory, making it possible to print jobs from legacy systems.

- Enables true 24x7 operation—a benefit of the application cluster in SafeQ Enterprise Edition.

- The YSoft SafeQ multi-vendor solution enables customers to integrate all their existing devices with the new system, providing precise and accurate accounting and security for all printers/MFDs at all customer sites.

- Automates report generation and distribution. Reports provide cost-related information that identifies potential bottlenecks and suggests ways to optimise the printer environment.

- Provides better user awareness of traceability and authentication, reducing employee's use of MFDs for private purposes.

- Tracks all printing costs and presents them in easy-to-read reports.

- Improves the efficiency of MFD usage by means of follow me function.

- Provides 99.9 percent availability of the entire solution with the use of the YSoft SafeQ Enterprise Edition application cluster.

- Delivers centralised, detailed reports based on data collected from several SafeQ installations.

Benefits at a glance

- Central management of all copy and scan jobs

- Detailed reporting of printing enviroment

- Special customized reports

- Availability 24/7

Solution specifications

Xerox products supported:

- Xerox WCP7345 MFPs, Xerox Phaser network printers

Software:

- YSoft SafeQ Enterprise Edition

Applications supported:

- AS 400, LDAP
