

Xerox Secure Access Unified ID System[®]

Security, compliance and personalization all in one swipe.

Information is your company's greatest asset. Xerox can help you keep it safe.

Xerox Secure Access Unified ID System[®] is a security option for your Xerox[®] advanced multifunction printers (MFPs). It integrates with your existing employee/student ID badge solution. A flexible and convenient identification system, Xerox Secure Access Unified ID System[®] enables users to log in to a Xerox[®] MFP with a swipe of their magnetic or proximity ID card. Users have a personalized interface which improves their print-related productivity.

Introducing Xerox Secure Access Unified ID System[®]

IT managers are looking for ways to protect all assets on their network. Multifunction systems are a logical place to secure networks and enhance document information security. Additionally, in today's regulatory climate, businesses need sophisticated ways of safeguarding their data. Many organizations rate network security as their foremost IT challenge.

To meet these needs, Xerox developed Network Authentication, which requires users to enter a user ID and password at the device. Some environments require a more convenient and streamlined method. So Xerox created Xerox Secure Access Unified ID System[®], which gives organizations with an existing card-based ID system a quick and easy method of identifying users at the multifunction printer. Users gain access to the device with one swipe of their ID badge. For an extra layer of security, two-factor authentication is an option. A PIN or password may be required.

How it works

The Xerox Secure Access Unified ID System[®] solution leverages an organization's existing ID infrastructure without impacting existing systems. With Xerox Secure Access Unified ID System[®] in place, a single identification step will log the user in to the device for access to all walk-up features. All communication to and from the multifunction system, card reader and authentication server will be secured using industry-standard encryption mechanisms.

The Xerox Secure Access Unified ID System[®] is also IT-friendly as the automatic access card registration feature allows new users to self-register their cards. The first time new users swipe their card they will be prompted to link their card with Xerox Secure Access Unified ID System[®] by entering their user account login. Once this is done, the card is associated with Xerox Secure Access Unified ID System[®] and users will have access to all associated multifunction printers.

Xerox Secure Access Unified ID System®

Added benefits

Gain flexibility with Follow-You printing

Follow-You printing, a feature of Xerox Secure Access Unified ID System®, makes it easy for people to securely print their documents to the most convenient device on the network. Simply submit a document to a secure print queue, walk up to any device equipped with Xerox Secure Access Unified ID System® and swipe an ID card to release the print job.

Xerox Secure Access Unified ID System® works with all Xerox® EIP-enabled multifunction systems

Optionally, when combined with the Xerox Extensible Interface Platform® (EIP), there are added Follow-You printing features available. Individuals can select how many prints they need, delete the document or securely store it to print again later. No longer will people waste time and money printing documents they never collect. The documents are only printed when you swipe your ID card and release them at the system. This means there's no need to worry about someone seeing a confidential document that you send to the printer.

Save user time

Xerox Secure Access Unified ID System® saves steps by giving the multifunction system the ability to populate certain user information fields when the user signs in. For example, the device will automatically fill in the "From" field when using scan-to-email.

Reduce IT support

Xerox Secure Access Unified ID System® is easily administered using a task-based management console that seamlessly integrates with the customer's existing network card-identification infrastructure.

Document security means peace of mind

One of the hallmarks of the Xerox® multifunction product line is a commitment to information security. Our systems, software and services understand and conform to recognized industry standards and the latest governmental security regulations.

Key Security Goals

Confidentiality

No unauthorized disclosure of data during processing, transmission or storage

Non-Repudiation

An entity cannot deny having sent or received a message

Integrity

No unauthorized alteration of data

Availability

No denial of service for authorized users

Accountability

Actions of an entity can be traced directly to that entity

Solutions Made Easier

The world is changing. There's constant pressure to do more with fewer resources. You know your business better than anyone. But did you know you can adapt your multifunction printer to fit the way you work and not the other way around?

Xerox Extensible Interface Platform® creates a whole new world of possibilities for the Xerox® MFP. With EIP, developers can easily create applications that are tailored to meet specific business needs.

When combined with Xerox Secure Access Unified ID System®, a personalized queue is displayed on the touchscreen with all of your print jobs, and only your print jobs, appearing. All this by simply swiping your ID card—simple, secure, personalized. For more information on EIP, visit www.xerox.com/eipinfo
