Xerox® FreeFlow® Accxes® Indexer

Enhance your wide format workflows

Take your Xerox Wide Format solution further

Xerox® FreeFlow® Accxes® Indexer Software is designed to deliver even more value from your wide format solution. With Accxes Indexer, dynamic file-naming for your documents is fast, easy and flexible. Advanced file naming and indexing are critical to optimising your document management solution. You can ensure it's easy to locate the file you want, when you want it – whether you begin with a hard copy or digital document.

All your documents are in reach with Accxes Indexer

Accxes Indexer is ideal for environments where you work with large volumes of digital and hard copy documents. You'll find it extremely useful if you work in a scanning bureau; a print-for-pay business; architecture, engineering or construction firm; a legal office; or an in-house centralised reproduction department.

With Accxes Indexer, you can create detailed file names that index based on your document's characteristics. This ensures quick and accurate storage and location of the document when required. Its advanced archive capabilities enable you to easily record and track key business information, such as statistics.

You can see, check and index in just one step

It's never been simpler to view your document, perform a quality check and create an index. Our integrated high-speed viewing software with zoom and pan functions lets you automatically "zoom" into your document's title block. This user-defined initial view area speeds up data entry from your original document's title block. Drag and zoom capability enables you to navigate an image in real time, and thoroughly check quality.

Work smarter, save time, increase productivity

You can use Accxes Indexer's built-in image editor to "clean up" documents that exhibit poor quality. You'll have access to our comprehensive image manipulation tools to perform functions including manual or automatic resizing, rotation, cropping, de-skew and de-speckle. If you find you are performing repetitive tasks, such as naming and conversion on a number of documents, you can automate these workflows to enhance your productivity.

Flexible and easy to use

You can configure versatile Xerox Accxes Indexer to fit almost any workflow you require. Whether you want to create a simple file-based archive or to import documents to a complex management system, Accxes Indexer can be configured to meet your needs. It can save documents, manually or automatically, in all industry standard archive formats, including Adobe® PDF, to create more portable and readily accessible files.

Accxes Indexer supports the following industry standard file formats:

- TIFF, CALS, HPGL/2 and JPEG
- Adobe PDF 1.7 and PS Level 3
Note: True Adobe support is enabled with Accxes Indexer

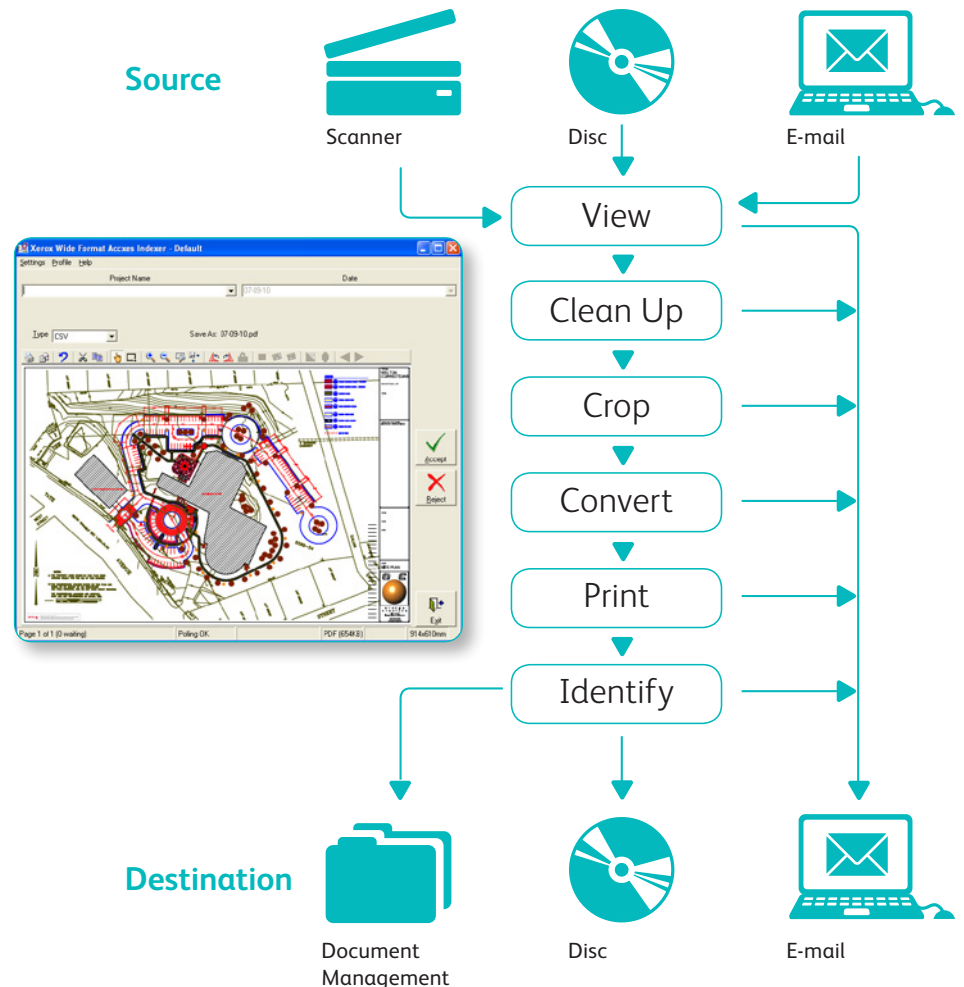

Accxes Indexer also supports the saving of indexing information as a part of the PDF metadata. You can also extract existing PDF metadata for use in your existing document management workflow.

Accxes Indexer enables the following workflows:

- **Support for all of your users.** You can have any number of indexers working off the same pool of images, an essential feature when your large indexing projects require multiple indexing operatives.
- **Support for multiple project profiles.** Since different projects will require different parameters, you can save and recall your settings for each project. What's more, you can switch among projects with ease and you'll save on set-up time.

- **Easy third-party system integration.** Accxes Indexer offers you tools to make it simple to integrate your images and index information into third-party document management systems.
- **Xerox® FreeFlow® Accxes Controller support.** Accxes Indexer provides direct access to any Xerox FreeFlow Accxes enabled device.

You can store multiple workflows to meet even the most complex document management solutions. Settings Profiles allow users to switch between workflows at the touch of a button.

Delivering more value from your wide format solution

Xerox FreeFlow Accxes Indexer Specifications

PC Minimum Specifications

- Processor: Pentium 4, 2 GHz, Core 2 Duo (recommended for colour printing)
